D'WALKReact®

PLANTILLA + SUELA/INSOLE + OUTSOLE/
SEMELLE INTÉRIEURE + SEMELLE

La suela **MaxReact®** y plantilla **D'Walk®** que de forma conjunta, consiguen una mayor amortiguación en la pisada y adaptación a la planta del pie.

MaxReact® outsole and the **D'Walk®** insole reduce fatigue by improving the shoe's cushioning and a better ajustment to the shape of the foot.

La semelle **MaxReact®** + la semelle intérieure **D'Walk®** assemblées permettent d'obtenir un meilleur amorti lors du déroulement du pied pendant la marche.

D'WALK®

ES Dian desarrolla una tecnología en su calzado laboral que permite minimizar la fatiga de los pies

D'WALKREACT® la innovación de Dian que aporta confort y descanso al pie

Dian, ha desarrollado una nueva tecnología que aporta a sus modelos características únicas en el mercado, consiguiendo reducir el cansancio con una combinación de suela MaxReact® y plantilla D'Walk® que de forma conjunta, consiguen una mayor amortiguación en la pisada y adaptación a la planta del pie.

Las cifras así lo demuestran:

El índice de resiliencia es del 47%, lo que proporciona un porcentaje de retorno de la energía mucho mayor, que gira en torno al 50%. La deformación estática y la fatiga por compresión dinámica nos indican que, al aplicar el peso corporal, el zapato no sufrirá ninguna deformación, obteniendo valores máximos del 1%, frente a valores normales que serían de un máximo del 34%, lo que indica que tendremos una deformación mínima de la suela y se reducirá la fatiga del pie. La absorción de impactos decelera más que en otros materiales habituales, provocando que la amortiguación no disminuya tras su uso.

Esto demuestra que la tecnología **D'WALKREACT®** ayuda a aumentar el confort, disminuye la fatiga y proporciona descanso al pie.

EN DIAN develops technology for work footwear that minimises foot fatigue

D'WALKREACT®: innovation by DIAN that offers your feet comfort and relief

DIAN has developed new technology that equips their models with entirely unique features: the combination of the MaxReact® outsole and the D'Walk® insole reduces fatigue by improving the shoe's cushioning and better adapting to the sole of the foot.

This is evident from the figures:

It boasts a resilience index of 47%, which in turn offers a far greater energy return, at around 50%. Its static deformation and dynamic compression fatigue levels show that the shoe will not deform when body weight is applied, achieving maximum values of 1%, compared to normal values of up to 34%, which indicates minimal sole deformation and reduced foot fatigue. Shock absorption is slower than in other common materials, preventing a loss of cushioning after use.

This shows how **D'WALKREACT®** technology helps improve comfort while reducing fatigue and offering your feet relief.

FR Dian développe une technologie dans leurs chaussures de travail qui permettent de diminuer la fatigue du pied considérablement

L'innovation D'WALKREACT® Dian apporte confort et repos du pied

Dian, a développé une nouvelle technologie qui donne à ses modèles des caractéristiques uniques sur le marché, réussissant à réduire la fatigue grâce à une combinaison de semelle MaxReact® et de semelle intérieure D'Walk® qui, ensemble, permettent d'obtenir un meilleur amorti lors de la marche et une adaptation de chaque courbure du pied.

Les chiffres le prouvent :

L'indice de résilience est de 47%, ce qui fournit un pourcentage beaucoup plus élevé de rendement énergétique supérieur, qui varie autour de 50%. La déformation statique et la fatigue par compression dynamique indiquent qu'avec le poids du corps, la chaussure ne subira aucune déformation, obtenant des valeurs maximales de 1%, par rapport à des valeurs normales qui seraient au maximum de 34%, ce qui indique que nous avons une déformation minimale de la semelle et la fatigue du pied sera réduite. L'absorption des impacts est ralentie plus que dans d'autres matériaux habituels, ce qui fait que l'amortissement ne diminue aucunement même après une utilisation excessive.

Cela montre que la technologie **D'WALKREACT®** aide à augmenter le confort, à diminuer la fatigue et à procurer un plus grand repos des pieds.
